

COMPUTER-BASED STANDARDIZED TEST ADMINISTRATION,  
SCORING AND ANALYSIS SYSTEM

ABSTRACT OF THE DISCLOSURE

**[0044]** A computer-based testing system is disclosed comprising: a data administration system including centrally hosted data administration servers; a network and an operational testing system the data administration system including a browser-capable workstation connectible via the network to the centrally hosted data administration servers. The operational testing system may include three subsystems connected to the network: a test delivery server running on a test delivery workstation and managing all aspects of a test session by acting as a data repository and hub for communication between the other subsystems, a proctor software running on a proctor test workstation providing a user interface for managing a test session by communicating with the test delivery server, and a student test software running on a student test workstation providing a user interface for displaying test items and recording responses.
